

Eicosamax® 1000

Ultra-pure, once daily essential fatty acid

Product features

- **Convenient:** 1,000 mg eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) per soft gel
- **Purity:** In addition to removing harmful toxins, compounds and impurities that can contribute to a fishy taste, Eicosamax® is molecularly distilled. Independent lab results consistently show that this processing technique delivers oils of exceptional quality and freshness. Natural mixed tocopherols are added as antioxidants, and natural lemon flavor is added to provide a clean, refreshing taste.
- **Quality-assurance tested:** To verify product purity, strength, and freedom from contaminants, each batch of Eicosamax® 1000 is analyzed for potential environmental toxins by an accredited, third-party laboratory.
- **Performance:** Eicosamax® 1000 is a premium quality fish oil product at an affordable price

Why Eicosamax®?

Eicosamax® 1000 is part of Klaire's essential fatty acid supplement line, providing concentrated omega-3 fatty acids in the natural, triglyceride form. Our fish oils go through an advanced manufacturing technique, known as Molecular Distillation, which is a highly specialized purification and concentration method that removes heavy metals and other toxins, and ensures no trans-fats are created during the purification process. All fish are responsibly and sustainably harvested off the coast of South America and processed in pharmaceutically-licensed production plants to ensure purity. Eicosamax® 1000 offers 1,000 mg of total EPA & DHA per soft gel, making it a convenient once daily supplement to support overall health.¹

Background

Omega-3 fatty acids are often called “good fats” due to the numerous roles they play in supporting health throughout life. Among its many functions, adequate levels of EPA & DHA have been shown to support:

- Healthy lipid metabolism and cardiovascular function^{11,2}
- Health central nervous system function³ and mood¹⁴
- Healthy inflammation modulation¹⁵
- Health metabolic function¹⁶
- Healthy pregnancy¹⁷

Unfortunately, it is common for Omega-3s to be deficient in the standard American diet, and the ratios of omega-3 fatty acids to omega-6 fatty acids are often suboptimal.¹⁸ The World Health Organization (WHO),⁹ American Heart Association (AHA),¹⁰ Institute of Medicine (IOM),¹¹ recommend consuming omega-3 fatty acids at levels between 500 mg to 1600 mg EPA and DHA daily to support general health, depending on age.
